LAS PERLAS PANAMA STEAMDRIED FISHMEAL (MarinTrust R-S)

Our plant in Panama segregates the freshest Pacific sardine and herring to produce a choice product resulting in a wholemeal fishmeal especially suited as a feed grade for aquaculture, swine, poultry and pet. High digestibility, palatability, low TVN and FFA and a consistent aminoacid profile as well as a very fine color and grind has secured a place for this product among feed manufacturers.

Panamanian fishmeal complies the Dioxin tolerance required by the EU veterinary standards as fishing is conducted in pristine waters. Besides, we have a registered HACCP program with the Ministry of Agriculture and we are also GMP+ certified (Good Manufacturing Practices Plus) by SGS. We have validated our veterinary registration in the United States, the European Union, China, Indonesia, Korea, Japan and most Central American markets. For the rest of the world, the official Panama Health Certification for Export is widely accepted.

Our fishing species and FAO area of operation are duly certified by MarinTrust RS (Responsible Supply v.3.0) in accordance to international regulations duly supervised by the Panamanian Fishery Authority under United Nations' FAO standards.

'Las Perlas' PANAMA FISHMEAL We offer the following alternatives:

- (1) 50 kg polypropylene bags (thermo-laminated bags) in 20'/40'containers
- (2) Powder bulk in containers (with inner liner)
- (3) Shipment in bulk vessels (bulk or bags)
- (4) 1.25 ton maxibags in 20'/40' containers.
